

I Built a AI Chatbot for website that answers visitors' queries instantly

What I'm building

A customer support AI chatbot that answers queries related to your product and services from your own website, and documents on your website page, which reduces **first response times by 70%**.

When a visitor hits the chatbot at the corner, it will collect some basic details

Data you can collect

1. Email
2. Full name
3. Phone Number (not here, but can collect)

The above details are customizable to make them mandatory or optional.

After that Visitor will write their query and go all in chatting with your business-oriented chatbot.

Images of how it look's in website are given below :

Travel Zone

Typically replies in a few minutes

Share your queries or comments here.

Email Id

example@gmail.com

Full Name

Xyz

Today

what your company does

Travel Zone is a travel blogging and destination discovery platform. It helps travelers choose destinations based on seasons, travel purpose, and preferences. It offers guides for couples, honeymooners, cultural explorers, and leisure travelers with well-researched, experience-driven content.

Type your message

Powered by Chatwoot

The above details will get stored in google spreadsheet to contact those visitors for future sales purposes.

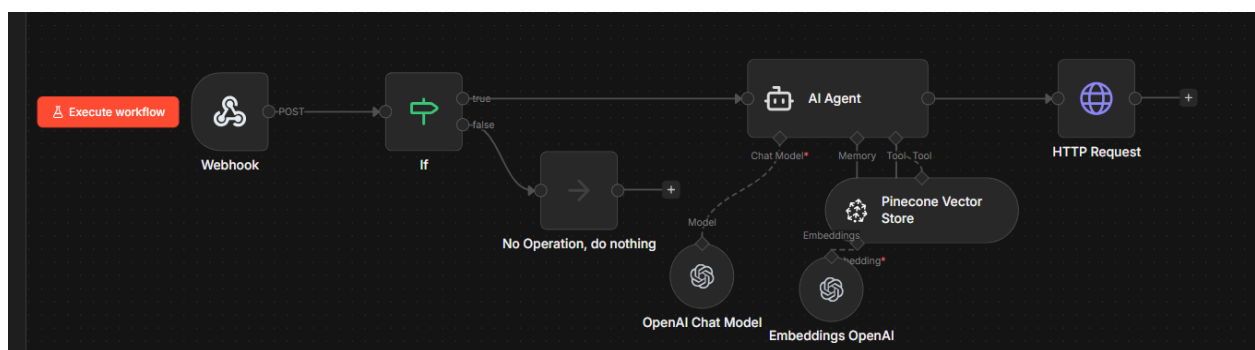

Why choose an AI chatbot?

1. Reduces the manual task upto 90 %.
2. AI has gone so far that it can resolve up to **91%** of common, routine queries without human intervention.
3. It will reduce first response times by 70% to 97%. In terms of operational efficiency, **they can reduce the average resolution time by 52%**.
4. **Reduced Workload**: 89% of employees reported having fewer repetitive tasks, allowing them to focus on higher-value work and **reduce labour costs** as well
5. Designed for a real use case based on the company's information provided to AI

Some Technical Guide

Core flow:

1. Visitor asks query (Recieved through **Wehbook** to start)
2. Clarify whether it's real person or some internal message (**if node**).
3. Understand the question & call pinecone tool gets the answer(**AI Agents**)
4. Information storing tool search for relevant info . (**Pinecone vector store**).
5. Reply back to chatboot (**HTTP request**).

Tools you need:

n8n (workflow logc + HTTP Request)

Chatwoot (Chatbot for website)

Pinecone Vector store (Stores info in the form of pdf, text, docs, etc)

THANK YOU
